DEIVID DA SILVA AFONSO

Senior Backend Engineer | .NET · C# · AWS | AI-Assisted Development

Diadema, SP — Brazil | +55 (11) 93233-3534 | deividsa@gmail.com | linkedin.com/in/deivid-da-silva-afonso-dev

PROFESSIONAL SUMMARY

Senior Backend Engineer with 7+ years delivering high-performance corporate systems in C#/.NET. Expertise in REST APIs, messaging (RabbitMQ), caching (Redis), cloud infrastructure (AWS) and relational databases (SQL Server, Oracle, PostgreSQL). Actively integrates AI tools — including Claude, GitHub Copilot and LLM-based automations — into the development cycle to accelerate delivery and eliminate manual work. Strong background in Clean Code, SOLID, code review and production support in agile environments. High performance in remote and asynchronous work with autonomy and clear objectives.

HIGHLIGHTS

- SQL Server/Oracle procedure and index optimization, reducing response time in critical production routines by up to 70%.
- P1/P2 incident management with root cause analysis (RCA) — reduced recurrences and cut MTTR from ~4h to under 1h.
- Async job and integration creation (Hangfire, RabbitMQ), automating operational flows.
- AI tool adoption (Claude, GitHub Copilot) in the development cycle — accelerated delivery and code reviews.
- AWS experience (EC2, S3, Lambda, RDS) in professional and personal projects.

SKILLS

Languages & Frameworks: C#, .NET, .NET Core, ASP.NET Core/MVC, REST APIs, Razor Pages, Angular (basic), Delphi

AI & Automation: Claude API, GitHub Copilot, prompt engineering, AI-assisted development, process automation

Messaging & Caching: RabbitMQ, Redis, Hangfire

Cloud: AWS (EC2, S3, Lambda, RDS, CloudWatch)

Databases: SQL Server, Oracle, PostgreSQL — queries, stored procedures, performance tuning

Practices: SOLID, Clean Code, N-Tier Architecture, system integration, code review, troubleshooting

Tools: Git, logging & monitoring, Docker (basic)

Agile: Scrum, Kanban

PROFESSIONAL EXPERIENCE

Basis Tecnologia da Informação S.A. — Software Engineer (.NET) Mar 2025 – Oct 2025

- Owned continuous delivery of a corporate C#/.NET system with 50+ modules, validating business rules with stakeholders and maintaining production stability.
- Rewrote SQL Server/Oracle queries and procedures, cutting critical report response times by up to 70%.
- Implemented AI-assisted code review (GitHub Copilot), reducing review cycles and catching regressions earlier.

G4F — Backend Engineer (.NET) Feb 2024 – Jan 2025

- Led optimization of 30+ procedures and indexing strategies across 200+ production routines.
- Drove MTTR reduction on recurring incidents through RCA and structural fixes with improved logging patterns.
- Introduced Clean Code/SOLID standards in code reviews, cutting rework by ~40%.
- Began integrating LLM tools for internal documentation and test case generation.

GovBr — Software Engineer (.NET) Sep 2021 – Mar 2023

- Built and maintained VB.NET/C# modules for a high-impact municipal system serving thousands of citizens, integrating SQL Server and Java APIs.
- Improved delivery speed and system stability for public services.

Marcius Magazine — Software Engineer (.NET) May 2018 – Sep 2021

- Built multi-branch ERP modules with .NET Core + PostgreSQL, integrating 3 external marketplaces (Mercado Livre, B2W).
- Automated order and inventory flows, improving data consistency and eliminating manual work.
- Implemented Selenium WebDriver regression test suite, enabling safer weekly releases.

EDUCATION

Associate Degree — Multiplatform Systems Development | Fatec Diadema | In progress (3rd semester) — Expected: 2028

Postgraduate — .NET Software Architecture | Anhanguera | Completed: Apr 2024
Associate Degree — Internet Systems | Fatec Jahu | Completed: 2020

LANGUAGES

Portuguese: Native | English: Advanced (B2/C1)

ADDITIONAL INTERESTS

Cryptocurrencies and DeFi protocols (personal hyperfocus — daily on-chain data, tokenomics and market dynamics tracking). Emerging AI/LLM technologies and frameworks. Open source contribution. Remote work culture.
